

Sharing the sun

As one of the leading experts for renewable energies, JUWI strives for a sustainable land-use, which combines a high quality in agricultural cultivation, biodiversity and solar energy production. This is the goal for our joint project.

Our international Agri-photovoltaic expert team ensures the high quality of our projects through:

- the adaptation of the PV system to the needs of the crops that guarantee the co-habitation requirement
- the environmental compliance for sustainable agri-photovoltaic systems
- the continuity of the agricultural activities as the main target for reaching the Sustainable EU Policies

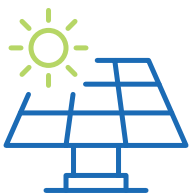

JUWI has a growing Agri-PV project pipeline with a current capacity of nearly 600 MW. Within our Agri-PV projects we involve the local communities and create job opportunities. The projects double revenue for the farmer and counteract the abandon of the rural areas.

The JUWI “sharing the sun” philosophy

- quality and conservation of ecosystems
- increasing the biodiversity
- harmonious landscape integration
- science and research (collaboration with the Fraunhofer Institute ISE)
- monitoring and collecting data (soil fertility, water use efficiency, crop yield and micro-climate parameters)

About the JUWI Group

For almost 30 years, we have been among the leading companies in the field of renewable energies – in Germany, Italy, Greece, USA, South Africa and in many other countries throughout the world. JUWI is one of the world’s largest project developers and EPC service providers for solar farms.

2,000 solar plants
worldwide

4,100 MWp
